SUMMARY

Mobile Engineer architecting and shipping production-grade Flutter applications for real estate, and marketplace platforms. Excel at building scalable, modular codebases that support multi-vertical and multi-tenant products, integrating complex payment systems (Paystack, Stripe), and refactoring legacy projects into clean, maintainable architectures. Combine strong architectural thinking with hands-on CI/CD expertise (GitHub Actions, Codemagic) to deliver reliable, performant apps end-to-end — from design translation to production deployment.

WORK EXPERIENCE

Freelancer Apr 2025 - Present

Mobile Developer

- Built and deployed cross-platform Flutter applications to Play Store and App Store for multiple clients
- Engineered scalable state management using Riverpod, Bloc, and Provider, choosing architectures based on project scope and needs
- Automated build, test, and deployment workflows by configuring CI/CD pipelines with GitHub Actions and Codemagic
- Integrated Firebase Firestore, Authentication, Cloud Messaging, and Analytics to power real-time data sync, secure login
- Implemented MVVM architecture, wrote unit/widget tests, and performed memory leak and performance profiling to ensure production stability

Westpay Global Feb 2024 - Mar 2025

Mobile Developer

- Translated Figma designs into responsive, pixel-perfect UIs across Android and iOS, ensuring consistent UX across multiple screen sizes
- Implemented MVVM architecture and clean code principles to ensure long-term maintainability and testability
- Collaborated cross-functionally with designers, backend engineers, and project managers, participating in code reviews and architectural discussions via Git/GitHub workflows
- Designed and implemented a scalable, modular Flutter architecture using bloc for state management

W2 Technologies Aug 2023 - Feb 2024

Software Developer

- Contributed to Beamify, a podcasting application featuring real-time audio streaming and live interactive sessions
- Built and maintained the Laravel backend, designing RESTful APIs and CRUD operations to power the mobile app's core features (user management, podcast management, subscriptions, and content delivery)
- Collaborated with a fellow developer on the Flutter mobile app, integrating WebRTC for real-time audio streaming and Pusher for live event broadcasting and notifications
- Deployed and managed the Laravel backend on cPanel, configuring databases, managing environment variables, and handling production releases
- Gained hands-on exposure to real-time communication protocols (WebRTC) and event-driven architecture (Pusher)

EDUCATION

Kwara State University Jan 2020 - Oct 2023

BSc. Computer Science - 3.6/4.0

PROJECTS

EstateGo - Multi-Tenant Estate Management Platform

Live on Play Store **and** App Store | **Tech:** Flutter, Dart, Paystack, Riverpod, Firebase

- Co-led the migration of EstateGo from FlutterFlow to pure Flutter, refactoring auto-generated code into a clean, modular, and scalable architecture to unlock custom functionality and improve performance
- A comprehensive multi-tenant estate management app serving four distinct user roles: Facility Managers, Tenants, Security Personnel, and Vendors — each with role-specific dashboards and permissions
- Rent and dues payment flows integrated with Paystack, enabling tenants to securely pay recurring and one-time charges
- Implemented a visitor management system that allows tenants to register visitors and generate unique visitor codes for security verification at entry points
- Developed in-app messaging between tenants and vendors for service requests and communication
- Leveraged Firebase Firestore for real-time data sync, Firebase Authentication for secure multi-role login, and Firebase Cloud Messaging for push notifications on critical events

Wavezio - Apartment booking, on-demand job marketplace, and household e-commerce

Development Complete — Pending Launch
Tech: Flutter, Dart, Bloc, Firebase (Firestore, Auth, Cloud Messaging), Stripe, Laravel (REST APIs)

- A 3-in-1 super app combining apartment booking, an on-demand job marketplace, and household e-commerce in a single Flutter codebase
- Apartment Module: Enables users to list and book apartments, with search, availability checks, reservation management, and Stripe-powered payments
- Job Marketplace Module: An Airtasker-style platform where users can post tasks, browse and bid on available jobs, and complete work for others, with secure in-app payment flows
- E-commerce Module: A full marketplace allowing users to sell and buy household items, with product listings, cart management, Stripe checkout, and order tracking
- Architected a modular codebase supporting three distinct product verticals while sharing core services (auth, payments, notifications)
- Consumed Laravel REST APIs with efficient data fetching, caching, and error handling

SKILLS

Mobile: Flutter, Dart, Native Android (Kotlin – basic), Platform Channels
State Management: Bloc, Provider, Riverpod, GetX
Backend/Cloud: Firebase (Firestore, Auth, Cloud Messaging, Cloud Functions, Analytics), REST APIs, Laravel/PHP
Architecture: MVVM, MVC, Clean Architecture, SOLID principles
Tools: Git, GitHub, Figma, Postman, Android Studio, VS Code, Xcode
Testing: Unit Testing, Widget Testing, Integration Testing
CI/CD: GitHub Actions, Codemagic
Other: Agile/Scrum, Code Review, Technical Documentation

SERVICE & CERTIFICATE

National Youth Service Corps (NYSC)

- From 15th of February 2024 to 14th of February 2025
